

Dr. Deep Khosa. After graduating as a veterinarian from Murdoch University in Perth, Western Australia, I spent a total of 17 years in companion animal primary care practice and clinical teaching. In that time, I successfully completed Membership qualification (by examination in small animal medicine) and am a Member of the Australian and New Zealand College of Veterinary Scientists. Later in my career, I completed my PhD in

veterinary education and shifted focus from clinical practice to academia. My passion for primary care practice and spectrum-of-care continues through my teaching and research roles in years 1-4 of the DVM program at the Ontario Veterinary College at the University of Guelph.

My research interests and direction are driven by my experiences of clinical practice, involving areas of focus that are relevant and applicable in day-to-day interactions with pet carers, companion animals, colleagues and students. My clinical teaching experience has particularly fueled my desire to research and investigate the learning environment and modalities that are effective for veterinary students, and to understand the spectrum of perceptions, experiences and capabilities that pet carers bring to the clinical care relationship.
